FOR IMMEDIATE RELEASE

A CEO'S VIEWPOINT ON
MALAYSIA'S E-INVOICING: TO BUILD OR TO BUY
- Marmin Technologies Shares Essential Insights With Malaysia's CEOs –

Kuala Lumpur, Malaysia, 24 December 2024 – With deadlines fast approaching for businesses in Malaysia to implement e-Invoicing, CEOs and decision-makers of large enterprises and Government-Linked Companies (GLCs) face a critical question: ***Should they build an in-house e-invoicing system or adopt an external platform?***

This decision carries significant implications for compliance, operational efficiency, and business outcomes. For instance, businesses must consider accreditation by the Malaysian Digital Economy Corporation (MDEC) as a PEPPOL Service Provider. The accreditation offers businesses the assurance of full compliance with Malaysia's regulatory framework.

Marmin is proud to announce that it is officially accredited by the Malaysian Digital Economy Corporation (MDEC) as a PEPPOL Service Provider. Marmin Technologies' MDEC accreditation solidifies its commitment to Malaysia's digital transformation, providing businesses with a trusted partner to navigate complex compliance landscapes with ease and confidence.

Comprehensive Resources to Drive Better Business Outcomes
To empower Malaysian businesses with confidence in their compliance journey, Marmin Technologies has launched two valuable resources tailored for CEOs and decision-makers.

"Every business is now a technology business. The build-vs-buy question is not just about compliance but about driving greater efficiency, transparency, and strategic growth," said Sangmesh Hiremath, CEO of Marmin Technologies. "With these resources, we aim to provide CEOs with the knowledge and insights they need to focus on what matters most—achieving their business objectives while minimising risks."

These resources include:
- CEO Interview: Gain actionable insights as Sangmesh Hiremath shares strategic considerations for navigating the build-vs-buy decision.
- Blog Article: E-Invoicing for Growth: Weighing the Pros and Cons of Building vs. Buying – A detailed guide exploring critical factors such as alignment with business goals, integrating with existing systems, and ensuring robust cybersecurity.
